

COLUMBIA ASTRONOMY OUTREACH PRESENTS:

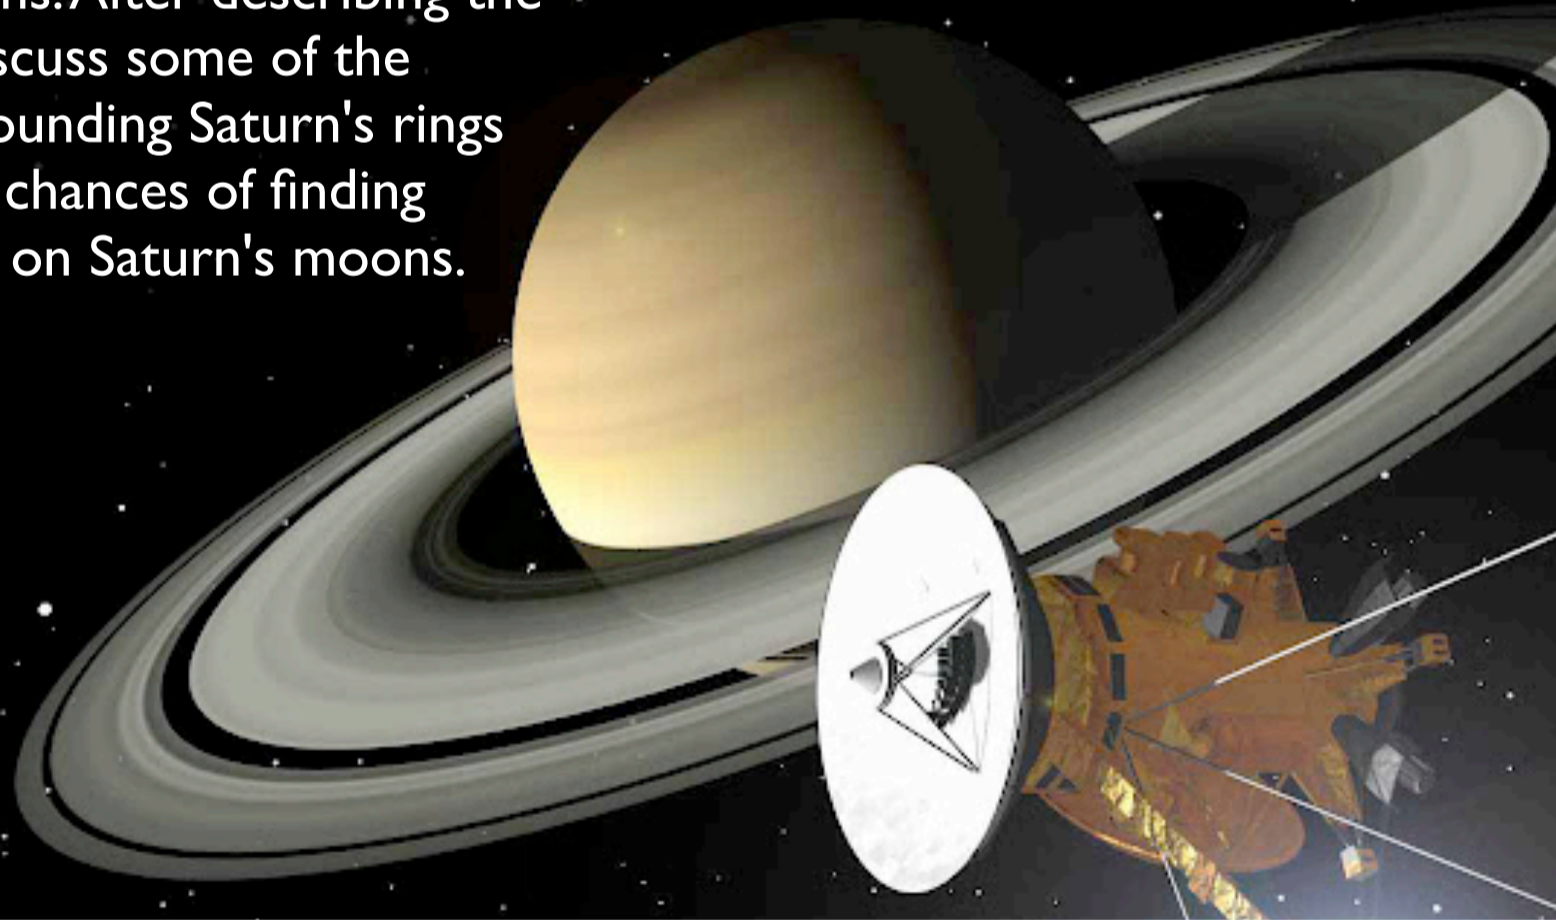

# STARGAZING & LECTURE SERIES

## Unlocking Saturn's Secrets: NASA's Cassini Mission

A lecture by Lauren Corlies  
Friday, August 10th, 8:00PM  
Pupin Hall, Columbia University

Saturn and its rings is one of the most iconic images of all astronomy. With as commonplace as it's become, it's easy to forget how much we don't know about this striking planet. This talk focuses on NASA's Cassini-Huygens Mission to Saturn and its moons. After describing the mission itself, I'll discuss some of the mysteries still surrounding Saturn's rings as well as our best chances of finding extraterrestrial life on Saturn's moons.

These are free lectures at a public level followed by guided stargazing with telescopes (weather permitting). All events are held at Pupin Hall at Columbia University. No reservations are needed. Lectures are 30 minutes, stargazing lasts 90 minutes. Stay only as long as you want.
