

COLUMBIA ASTRONOMY OUTREACH PRESENTS:

# STARGAZING & LECTURE SERIES

## The Ultraviolet Universe

Steven Mohammed  
Friday, November 2nd, 7:00PM  
Pupin Hall, Columbia University

The universe is full of objects that emit light in ultraviolet wavelengths yet these phenomena are difficult to observe due to absorption via the Earth's atmosphere. In this talk I will give a brief overview of the history of ultraviolet astronomy and discuss some very interesting results that have come from NASA's latest ultraviolet telescope, the Galaxy Evolution Explorer (GALEX).

These are free lectures at a public level followed by guided stargazing with telescopes (weather permitting). All events are held at Pupin Hall at Columbia University. No reservations are needed. Lectures are 30 minutes, stargazing lasts 90 minutes. Stay only as long as you want.

For directions, weather updates and more information, please visit:
